

Moto-Roll Jack

The Handy Moto-Roll Jack packs the lifting power of a scissor lift in a compact design. It allows easy accessibility for making repairs, wheel removal, oil changes, and basic maintenance. The 16" long by 17" wide support platform will accommodate any motorcycle, ATV, golf cart, or garden tractor that has an exposed frame.

The Moto-Roll Jack has three different locking safety heights so you choose the working height that's best for your job! The frame pads measure 16" long by 17" wide with a 13" clearance in between. Coated with durable wrinkle black and gray powder coat, the Moto-Roll Jack has vinyl-plastisol dipped "frame supports" to prevent scratching your project, plus keeps it from slipping off the jack.

The removable jack handle makes moving your jack and motorcycle around your shop a breeze! The four 3" phenolic wheels with roller bearings keep your shop floor looking its best.

If your garage is short on space, look no further than the superior stability and mobility offered by the Moto-Roll Jack from Handy, always American made.

Moto-Roll Jack Item 22100
